

Crop Report - week: 49-2011

Company: Onings
Crop: Field bulbs (2 year bulbs, scales and 1 year bulb)
Crop year: 2012
Site: Valdivia
Operation Manager: Alex Aylwin Sch.

General comments

2 year growing bulbs (second season)

All bud flowers have been cut for the first time and now we are finishing a second round.

The crop is looking strong and getting the color back after debudding.

The spots with aphids are completely controlled by spraying and we continue looking for some left plants with virus after the third round.

The spraying, fertilization and irrigation goes under the program.

2 year growing bulbs (first season)

All plants have emerged at this moment and continue growing.

The spraying, fertilization and irrigation goes under the program.

Scales

Almost all plants have emerged and still we can see some of them coming out.

The color is looking good and a lot of new roots are coming.

The spraying, fertilization and irrigation goes under the program.

1 year bulbs

At this stage the first buds are coming so we should start debudding in two weeks time.

Good colors, strong stems and roots can be seen.

The spraying, fertilization and irrigation goes under the program.
